Treasury, Multi-Currency FX & Float Settlement SOP

Operational principles for vault liquidity management, foreign exchange exposure hedging, and cross-border bank wire rebalancing.

1. Vault Liquidity Thresholds

Vault Hub	Local Currency	Min Float Alert	Target Optimal Float
Banjul Main Vault	GMD (Dalasi)	100,000 GMD	850,000 GMD
Dakar Central Vault	XOF (FCFA)	2,000,000 XOF	12,500,000 XOF
Conakry Main Vault	GNF (Guinean Franc)	20,000,000 GNF	180,000,000 GNF
Guangzhou Cash Desk	CNY (Yuan)	20,000 CNY	150,000 CNY

2. FX Rate Setting & Spread Policy

- **Mid-Market Benchmark:** FX rates update every 60 minutes from Central Bank and interbank benchmark feeds.
- **Spread Protection:** Fixed 1.0% spread added to raw conversion rates to protect against intraday currency volatility in frontier West African markets.
- **Automatic Rate Freeze:** FX rates lock for 10 minutes once a customer transaction slip is initiated at the Cash Desk.

3. Daily Float Rebalancing Workflow

- **EOD Net Surplus Sweep:** Origin desks (China, UK, US) sweep daily collected cash surplus to regional treasury bank accounts at 17:00 local time.
- **Payout Counter Top-Up:** Payout vaults falling below minimum thresholds receive intra-day local bank transfers or authorized armored transport drops from regional central vaults.
